*Abstract:* We give examples of Banach spaces  $X$  and  $Y$  such that the sets of  $\alpha \in (0, 1]$ , which satisfy that every  $\alpha$ -Hölder maps from a subset of  $X$  into  $Y$  can be isomorphically extended to all  $X$ , are not closed. This answers a question of Lancien and Randrianantoanina.

*Key words:* Extension, Hölder map.

AMS *Subject Class.* (2000): 46B20, 46B42, 54C20.
