Abstract: Let $K_{m,2}$ be the torus knot of type $(m,2)$. It is well-known that the fundamental group of $S^3 \setminus K_{m,2}$ is $G = \langle A, B | A^m = B^2 \rangle$. In this paper we obtain a defining polynomial of the character variety $X(G)$ which allows us to give an easy geometrical description of it.

Key words: Torus knot, character variety
AMS Subject Class. (2000): 57M25, 57M27
